

ISM4641: Python for Business Analytics

Lecture 3 Agenda: Data Structures and Functions

Dr. Tim Smith

February 15, 2025

1. 15 mins - Review list of topics (see: summary_thus_far.pdf)
2. 15 mins - Ask students for any areas which they don't understand – ask them to provide you with a sample question from the practice set that is close.
3. 15 mins - Work through 2 or 3 problems to illustrate/expand on concept
4. 20 minutes - Review the CASE01 “The Cozy Coffee Corner”
5. 10 mins - Take quiz
6. 10 mins - Ask students if there were any concepts they struggled with - and work through an example
7. 10 mins - Take second attempt at quiz
8. take survey – ask how the course is going / explain that if we are to get to the point of doing predictive analytics, we need to work through python basics at the pace we are on. If this is too much, I can slow things down, but it will mean that we will not get to the more advanced topics. Put this to a vote.
9. Review the new content for the day - keep it simpler – just discuss Tuples and Sets – we will move functions to next week.
 1. Tuples
 2. Sets
